Vibrometer Software

The **PICO**SCALE *Vibrometer* is delivered with two programs that can be operated in parallel.

1. The vibrometer control software is required to operate the instrument with a regular PC. An intuitive user interface allows to perform complicated measurements with a few mouseclicks.
2. The vibrometer view software is offered to analyze the recorded vibrometry data. It contains a variety of options to process the data for visualization optimization in 2D and 3D but also to export the recorded binary data file into formats that can be easily imported by third party software.

The software is used to configure and control the system and provides powerful options for data analysis.
